Research Methods - Assignment 1

Dean Baltiansky

10/28/2021

1 Load data

```
df_exp1 <- read.csv("https://raw.githubusercontent.com/bocowgill-collaborations/ResearchMethods-Reposit
    sep = "")
```

2 Statistical analyses

Does having an education from an elite college increase the chances of getting a callback?

```
m1 <- lm(calledback ~ EliteSchoolCandidate, data = df_exp1)
```

3 Output

```
apa_lm <- apa_print(m1)
apa_table(apa_lm$table, caption = "Linear model predicting chance of receiving a call back
  for an interview from having a degree at an elite university",
    placement = "h")
```

Table 1: Linear model predicting chance of receiving a call back for an interview from having a degree at an elite university

Predictor	b	95% CI	$t(862)$	p
Intercept	0.59	[0.54, 0.63]	25.97	$< .001$
EliteSchoolCandidate	0.14	[0.07, 0.20]	4.27	$< .001$

The analysis indicates a positive relationship between having a degree at an elite university and getting a call back for an interview. That is, when sending out resumes that are otherwise identical, having a degree at an elite university increases the chances of getting a call back for an interview.
